

23-10-2008.

My name is Vinnie Offenbaker, I am 21 years old and I drive a 1991 Isuzu Mu equipped with the factory 2.4 petrol engine, I have owned the truck for 6 months and use it for work and play, It is fitted with a long range tank to give it a bit more scope. Since I have owned it I have averaged 550 klm per tank driving under typically NZ conditions, and at times I have struggled with my fuel bill. My surrogate Dad was trying something out in his Terrano and suggested I give it a shot, Save lots of fuel, no smoke and make more power he said, So, I bought a 10 pack of Envirotab and started using it, After the first tank I noticed that the engine was running smoother, it was more responsive and it soon returned around 750 kms, I was pretty happy with that, I have since used the whole 10 tablets and the best mileage was just under 800 klm out of a tank and she felt like a brand new car and it has averaged around the 750 klm the whole way through. I ran out of tabs and drove the truck for about 10 days without the benefit of the Envirotab and my fuel consumption has slowly increased back to the level it was at before I started on them. I have just bought another couple of packs and am now so convinced that I am telling all my mates about it so that they can enjoy a bit of extra play money at the end of the week. Thanks Tony for the intro to Enviro-tab, it really does work.
